THREE ULTRA-MICROCURRENCY TRADES YOU CAN BUY FOR UNDER \$0.80

In order to find moneymaking microcurrency opportunities, I use something called a **Fractal Wave Pattern**.

Fractals are unique mathematical patterns that infinitely repeat themselves. They're caused by extremes in investor psychology, which result in crazy ups and downs in prices.

And they're usually so tiny that they go undetected in everyday market analysis.

But my technology finds these tiny microcurrencies in droves...

It's all based on two currency waves:

- Long-Term - smooths out a coin's price action over the last month
- Short-Term - smooths it out over hours, maybe days

And when these waves cross, BOOM - we make our move.

My system recently spotted this pattern on three microcurrencies trading under \$0.80.

And each one has the potential to give you triple-digit gains within 30-60 days.

Tom Gentile is one of the world's foremost authorities on stocks, futures, and options trading. Starting his investment career from his parents' home in 1986, Tom quickly climbed the ranks of the American Stock Exchange. In 1993 he and a group of partners started an educational company called Optionetics, a leader in the field of options education that was eventually sold to Charles Schwab. A prolific teacher and author, Tom has appeared on financial programs featured on CNBC U.S. Europe and Asia Squawk Box, Bloomberg, Reuters, and Fox Business with Neil Cavuto, and is a contributing columnist to Stocks and Commodities Magazine.

1) Golem (GLM)

Currently trading below \$0.60, GNT is potentially one of the best use cases of blockchain tech for the masses. By creating a decentralized computer, GLM lets users buy and sell computing power directly from each other, rather than through centralized servers.

2) Decentraland (MANA)

MANA is one of the most unique crypto projects out there. It's a virtual reality world hosted entirely through the blockchain. In it, users can buy plots of land to navigate through, build on, and even monetize. It can be compared to the beginnings of a real-life Ready Player One, Spielberg's 2018 futuristic film. And right now, it's trading for just under \$0.80.

3) Loom Network (LOOM)

LOOM is a two-layer solution for Ethereum. Essentially, it's a platform built on top of Ethereum that lets application developers access more computing power. Its main purpose is to drastically speed up the network while lowering fees, and it's the cheapest coin of the three, trading below \$0.12.

Please Note: GLM and LOOM can only be traded through Coinbase Pro. If you have a Coinbase account, Coinbase Pro is free to use. The only difference is that Coinbase Pro has significantly lower fees, but it's less intuitive to use.

Each of these coins is good for hundreds of percentage-point gains in the short term.

Now, the moment it's time to exit - or when a new microcurrency appears as a BUY - I sent real-time alerts to my **Fast Fortune Club** subscribers. If you'd like to receive these updates, you can find out more **right here**.

These Cryptos Beat Bitcoin by 2,373%

Legendary trading expert who accurately predicted Bitcoin's price rise in 2019 and 2020 believes to have found a little-known currency market that could be on the verge of a major bull market. **See his full research and presentation here.**
